The drive behind SSL4ADULTS

Our Aim is to develop adult learners and educators' key competencies by improving their socio-scientific literacy.

Socio-scientific issues are on the rise.

Now more than ever we are faced with ill-structured issues such as global climate change, preventing coronavirus, and consumption of GMO foods.

Effective decision making is now influenced by factors such as short-cut bias, misunderstandings, and risk perceptions.

Individuals entering the decision making process on sociocentric issues are easily persuaded by their peers, family, and the media.

Fair evaluation of sources of evidence and questioning the reliability of multiple sources aids in proper decision making.

Government and policymakers aim to make decisions on local problems and controversial global issues by properly analysing evidence.

What are we working on?

- The step-by-step framework requires desk research and analysis implemented by academicians, field experts, adult educators, and NGO representatives.
- The (self) assessment tool will measure users competencies for lifelong learning in regards to cultural awareness, mathematical competencies, and much more!
- The learning resources training tool box materials for low skilled adults will set the guidelines of the aims and target of the training subjects by creating 18 modules.
- This project will develop an interactive e-learning platform as a learning management system which will allow self-paced learning along with unlimited access to all materials.

We ensure inclusion!

All learning materials will be translated into multiple languages including videos or podcasts for each unit.
